The LWWMD is THE organization responsible for measuring the physical and chemical condition of Lake Wallenpaupack. Through regular sampling with complicated probes, gauges, nets and meters, constant water testing insures that water quality meets or exceeds standards required to insure safe use for boaters, water skiers, fishermen and swimmers. Seeking out the points of pollution within the 212 square mile watershed, and addressing the problems are also paramount missions. While financial grants are part of the process it's individual and business contributions that allow the work to continue.

Please Support the Lake Wallenpaupack Watershed Management District. Your Donations will help keep the lake the "Crown Jewel" of the Poconos. Send Contributions to:

Lake Wallenpaupack can support a cold, cool and warm water fishery. The fish listed have either been stocked or are naturally occurring, but all species were at one time or another netted, trapped or caught in the lake by anglers or during PA Fish and Boat Commission or PPL collection surveys since the early 1970's.
